

# getAccountDetails

## Operation

### getAccountDetails

**AccountDetailsResponse** `getAccountDetails ()` throws **AccountAPINGException**

Returns the details relating your account, including your discount rate and Betfair point balance.

Return type	Description
<a href="#">AccountDetailsResponse</a>	Response for retrieving account details.

Throws	Description
<a href="#">AccountAPINGException</a>	Generic exception that is thrown if this operation fails for any reason.

Since 1.0.0

**Please note:** The data returned by `getAccountDetails` relies on two underlying services. The `pointsBalance` is returned by a separate service from the other data.

As a consequence of this, in the event of a failure to a single underlying service, either the `pointsBalance` or the remaining data may not be included in the `getAccountDetails` response. If both services fail, the error `UNEXPECTED_ERROR` will be returned.
